Thin snowpack in N. Madison

Date Thu, 11/30/2023 - 05:15 Activity Skiing

Today (11/30/23) we looked at the snowpack in the northern Madison Range/Big Sky area. At 9,300' on a northeast <u>aspect</u> there was around a foot of snow (30-45cm) which is mostly weak layers of facets. When the mountains get more snow we expect avalanches to break on this weak snow.

Region Northern Madison Location (from list) Yellowstone Club Observer Name Alex Marienthal
