

Blackmore

Date

Sat, 01/27/2024 - 12:00

Activity

Skiing

Went for a tour up to Blackmore today. We observed a few natural slides that released in the past few days. Most had relatively small crowns being 1foot, with crowns around 50 foot and ran short distances. We observed a rather large crown near the Blackmore summer trail just below the saddle that also released naturally and looked to have up to a 4 foot crown.

Region

Northern Gallatin

Location (from list)

Mt Blackmore

Observer Name

Tommy S
