

Stable snow in South Plateau

Date

Tue, 02/06/2024 - 15:10

Activity

Snowmobiling

We rode South Plateau the last three days. The snow has been stable on steep slopes. We did observe a fresh powder layer of 24" with an ice layer beneath that is roughly 4" thick and faceted snow another 12" down with another ice layer. The snow has been very stable while we are riding and we have not observed any slides or had any issues.
