Snow Pit Profile Fisher Pk Beartooth, MT Elevation (t) 9848

Aspect: 72

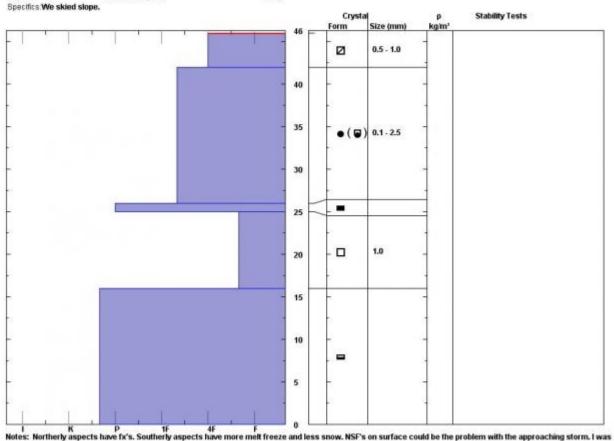

Observer: Mark Staples Sat Oct 26 13:30:00 MDT 2013 Co-ord: 45.06706 N 109.95652 W

Slope: 26 Wind loading: no Stability on similar slopes: Very Good Air Temperature: C PS4 HS46 Stability Test Notes: Layer notes:

42-46: Problematic Layer

Sky Cover: Clear Precipitation: None

Wind:

Notes: Northerly aspects have fx's. Southerly aspects have more melt freeze and less snow. NSF's on surface could be the problem with the approaching storm. I was surprised how well developed the fx's at 25-16cm were. Not like last year, but not too bad. Despite the warm weather, I think the week+ of high pressure has helped drive the faceting process with some really clear nights. We'll see what happens in the next month or so.
